International Cooperation at the Faculty of Philosophy and Religious Studies

The Faculty of Philosophy and Religious Studies is integrated into the EU higher education network. This enables us to more easily and efficiently achieve international mobility of students and teaching staff. Namely, the exchange of knowledge and experiences with schools from abroad is an integral part of modern educational practice. With new knowledge and experience, we contribute to the constant improvement and review of our own educational practice. However, in addition to new knowledge and experience of staying and studying abroad, students and teaching staff get to know international educational practices, programs and projects through their mobility, and at the same time make their own work and activities part of the international context. Therefore, the Faculty of Philosophy and Religious Studies opens its doors to foreign students and teaching staff, and encourages its own students and teaching staff to academic mobility in the EU and beyond.

In order to encourage, establish and develop FFRZ cooperation in a foreign context, either at the level of student or at the level of teacher mobility, at the Faculty of Philosophy and Religious Studies of the University of Zagreb, the Commission for International Cooperation is in charge academic year 2023/2024.

Assistant Professor Luka Janeš, PhD, [President of the Commission for International Cooperation](#)

Logic

Lecturer: Assistant professor Ines Skelac, Assistant professor Igor Martinjak

L + E + S: 45+15+0

ECTS: 5

Course code: 31373

Course Description

Logic is one of the central instruments of methodical philosophical and other scientific thinking. The course Logic introduces a student to the theory and practice of argument evaluation through the principles of formal and informal logic and critical and creative thinking, with special emphasis on their application in the study of philosophy and religious sciences. Specifically, this includes understanding and recognizing arguments in everyday and scientific use, learning and understanding logical rules, the relationship between logic and natural language, writing in the language of propositional logic and using logical connectives, validating conclusions with truth table methods, reductio ad absurdum and truth trees, recognizing frequent logical errors, and the study of methods of successful argumentation.

History of Ancient Philosophy

Lecturer: Full professor Anto Gavrić

L + E + S: 45+30+0

ECTS: 5

Course code: 31401

Course Description

Ancient philosophy covers the period from the origin of philosophy and science in Greece (6th - 5th centuries BC), through a deeper study of the philosophical systems of Plato and Aristotle, then follows the sequence of the main teachings of the Stoics, Epicureans, Sceptics and several important Neoplatonists until the closure of the philosophical school in Athens in 529.

Students are introduced to individual philosophical schools from that period by reading and interpreting key texts in a systematic way.

The objective is to show students how important ancient philosophy is for understanding the scientific culture of the West, how much it is present in the Christian thought of the first centuries, in medieval and Renaissance philosophy, and how much it is still a source of inspiration for modern philosophy.

The course consists of lectures and exercises in groups and aims to provide an introduction to a wide range of philosophical disciplines: logic, cosmology, natural history, physics, metaphysics, ethics, political philosophy, aesthetics, anthropology, etc.

The objectives of the course will be achieved through a chronological approach and treatment of thematic units, reading of original texts and critical discussions

Elective Course in Ancient Philosophy: Philosophy as a Therapy of the Soul

Lecturer: Assistant Professor Marina Novina

L + E + S: 30+0+0

ECTS: 3

Course code: 241115

Course Description

Concepts of philosophy have changed throughout history, and philosophy was generally considered a demanding discussion of abstract questions reserved only for experts. However, from antiquity to the present day, philosophy, in addition to being a teacher of wisdom, also carried the attributes of a doctor, comforter and therapist. Moreover, from antiquity until today, the philosophy is inseparable from medicine, but also from the most intimate part of the human being, and since antiquity it has been understood as an therapy of the soul. Such claims are supported by the texts of ancient philosophers (eg. Epicurus, Socrates, Aristotle, Plato, Marcus Aurelius, Augustine, etc.) and emphasized by many excellent experts of ancient philosophical

thought (eg Domański, Hadot, Voelke). In this course, we will learn about philosophy as therapy of the soul [(mind, heart, language) which is important for building character, for everyday life, part of growing in wisdom and for the relationship with medicine], through the texts of ancient philosophers and through scientific research literature.

Elective Course in Ancient Philosophy: Philosophy and Medicine

Lecturer: Assistant Professor Marina Novina

L + E + S: 0+0+30

ECTS: 3

Course code: 241116

Course Description

Course objectives are to acquaint students with the relationship between philosophy and medicine in the era of the emergence of philosophy and medicine. Also, to acquaint students with philosopher-doctors, with the development of medicine and with the first theories about health and disease. And to train students to recognize the fundamental philosophical topics in medicine once and today and to analyse the relationship between philosophy and medicine throughout history.

.....

Aesthetics

Lecturer: Full Professor Daniel Miščin

L + E + S: 30+0+0

ECTS: 3

Course code: 31388

Course Description

The course deals with the development of an aesthetics through the history of philosophy. The lectures follow a historical sequence, primarily for methodological reasons. Namely, analogous to the central idea of iconology developed in the first decades of the twentieth century by Aby Warburg and Erwin Panofsky, philosophical discussions of the problem of beauty and art are viewed primarily as an eminent expression of the culture and spirit of the time in which they originated. Students follow the presentations of the history of the aesthetic problems by reading and analyzing the most important pages of the literature on aesthetics of a particular period. In parallel with the study of the aesthetic problems in philosophy, selected works of art are analyzed in terms of the application of the newly studied theoretical principles in aesthetics. This element is an important component of the course insofar as it seeks to point out that aesthetic ideas are not merely abstract concepts that do not touch reality, but their application can be pointed out by analyzing some of the most important works of Western civilization. The course consists of lectures that include the mentioned presentations of the history of aesthetic problems and indicate their application to selected works of art.

Renaissance Philosophy

Lecturer: Full Professor Anto Gavrić

L + E + S: 30+30+0

ECTS: 4

Course code: 40032

Course Description

The course consists of lectures and exercises, and includes processing of thematic units, reading of original texts, critical discussions and work in groups.

The objectives of this course are to introduce the students to the sources, basic concepts, directions, topics and representatives of philosophy (with their conception of philosophy) in the context of the historical epoch of the Renaissance from 1300 to 1600. Especially with Renaissance humanism as the general intellectual basis of Renaissance culture and with the emergence and development of Renaissance Platonism, Aristotelianism and the philosophy of nature, but also to point out the connection of philosophy with the art of that period and to point out the meaning of Renaissance philosophy for understanding the philosophy, science and culture of the West.

SUMMER SEMESTER

Undergraduate study programme

Phenomenology of Religion

Lecturer: Assistant professor Marija Džinić

L + E + S: 30+0+0

ECTS: 2

Course code: 23557

Course Description

The aim of the course is to familiarize students with the phenomenon of religion as peculiar to man (lat. proprium), its significance for man and culture, as well as with religious and religious phenomena, their manifestations in the world and in human consciousness in the past and present, and to draw attention to their transcendent character and their connection with natural reality.

Philosophy of Knowledge

Lecturer: Associate professor Barbara Ćuk

L + E + S: 60+30+0

ECTS: 6

Course code: 228395

Course Description

The philosophy of knowledge (epistemology) studies the conditions, sources, and reach of human knowledge. The course Philosophy of Knowledge introduces the student to a philosophical reflection on the phenomenon of human cognition and the criteria of knowledge for the purpose of a constructive and critical approach to the world. It pays special attention to topics typical of the analytical and (neo)scholastic epistemological tradition, and to their contextualization into the history of Western philosophy. Topics: 1) What is epistemology? Why epistemology? 2) Approaches to cognition; 3) Definition of knowledge; 4) Belief and

judgment; 5) Truth; 6) Justification of knowledge; 7) Sources of cognition; 8) Scepticism and reliability; 9) Cognition and being; 10) A priori cognition; 11) Epistemic normativity.
Exercise content: reading and commenting on selections from the works of important classical and contemporary epistemologists.

History of Medieval Philosophy

Lecturer: Full professor Anto Gavrić

L + E + S: 45+30+0

ECTS: 5

Course code: 31404

Course Description

The Middle Ages is a philosophically extremely important period from the 5th to the 15th century, rich in numerous debates, the study of which is necessary for understanding the development of philosophical thought, and thus for contemporary philosophical thematization. Namely, the confrontation between Greek rationality and Judeo-Christian and Islamic belief was reshaped by philosophical questioning, opening new horizons and new perspectives. The history of medieval philosophy studies the documents and writings that transmitted the thought of the Middle Ages and interprets their relationship with the cultural givens of that period, in order to make them more fruitful for a better understanding of the development of Western philosophy.

Course objectives: To show the influence of ancient philosophy and authors from the patristic period, a dialogically open philosophy in an interreligious context, to bring closer thinkers who created systems out of a great philosophical interest and can be considered representatives of the most important results achieved by the interaction between philosophy and theology: Augustine, Boethius, Pseudo-Dionysius the Areopagite, Anselm of Canterbury, Peter Abelard, Bernard of Clairvaux, Maimonides, Avicenna, Averroes, Albert the Great, Thomas Aquinas, Bonaventure, John Duns the Scots, Dante Alighieri, Meister Eckhart and William of Ockham. Provide an introduction to a wide range of philosophical disciplines: logic, cosmology, metaphysics, ethics, aesthetics, anthropology, political philosophy, etc. Lectures include processing of thematic units with a brief historical context, reading of original texts, critical discussions and work in groups.

To introduce the students to the most important schools and authors of the Middle Ages, the diversity of their learning and thinking about the most important philosophical topics, important concepts and definitions, the diversity of approaches and thinking, the importance of medieval philosophy for understanding the scientific culture of the West, and its relevance and significance for contemporary philosophical thematization.

Elective Course in Christian Anthropology: Anthropological and Christian Character of Moral Theology

Lecturer: Assistant professor Tadija Milikić

L + E + S: 30+0+0

ECTS: 2

Course code: 228396

Course Description

This course aims to deepen the understanding of the human and Christian character of moral theology. Primarily it seeks to stress the distinctively human, i.e., ethical character of moral theology, the prime interest of which is man and his realization under the aspect of his free, i.e.,

human activity. With a clearer insight into the dimension of moral theology which is common to any other moral, or rather, ethical scientific discipline, we wish to stress its particular scientific interest at the moral level - human character. Aside from the specificity of moral theology, the seminar strives to point out also the singular Christian character of moral theology. This is done through an underpinning in the moral teaching of three of the most prominent representatives of the great historical periods of Christian morality: the Apostle Paul (the Apostolic period), Aurelius Augustin (the Patristic period) and Thomas Aquinas (the Scholastic period) whose moral teaching comprises the historical substructure of our contemporary understanding of moral theology.

Elective Course in Philosophy of God: Contemporary Science and Existence of God

Lecturer: Assistant professor Marina Novina

L + E + S: 30+0+0

ECTS: 3

Course code: 241117

Course Description

Course objectives are to acquaint students with theses and debates related to arguments in support of God's existence in relation to the assumptions and theories of contemporary science. To enable students to recognize, differentiate and understand different arguments in support of God's existence, different attitudes of scientists towards the question of God's existence, the limits of science, borderline issues of science and religion, and to independently argue their own point of view on the relationship between modern science and religion based on the literature read.

Seminar in Religions: The Relationship Between Religion and Science

Lecturer: Assistant professor Petar Tomev Mitrikeski

L + E + S: 0+0+30

ECTS: 3

Course code: 228399

Course Description

The purpose and goals of the course are achieved through several thematic (teaching) units that seek to achieve the conceptual comprehensiveness of the given topic. Thus, individual thematic units are covered with three main subtopics: (i) *a historical overview of the concepts of religion and science*, (ii) *levels, i.e. perspectives of their relationship*, and (iii) *the state of the relationship in different world cultures with an emphasis on the Christendom*. The first subtopic covers the following units: (i.1) *the concepts of religion and science*, (i.2) *their state in the Middle Ages*, and (i.3) *religion and science in modern times*. The second subtheme deals in more detail with their current relationship, focusing on individual considerations, and includes: (ii.1) *inconsistency*, (ii.2) *mutual independence*, (ii.3) *possible dialogue*, and (ii.4) *proposed philosophical unification*. The third subtopic includes: (iii.1) *the relationship between religion and science in Christendom*, (iii.2) *a brief overview of the relationship between religion and science in predominantly non-Christian societies*, and (iii.3) *the survey results on the attitudes of scientists and the general public about religion and science*. Also, if students want, the lecturer can organize a debate on a given topic, which deals with an individual thematic unit chosen by students. All students participate in the debate while the lecturer only observes and arbitrates if necessary.

History of Contemporary Philosophy

Lecturer: Assistant professor Ines Skelac, Marijana Kolednjak PhD

L + E + S: 45+30+0

ECTS: 5

Course code: 39710

Course Description

The aim of the course is to acquaint students with: problematizations and methods of contemporary philosophy; main philosophical currents, thinkers and their works and point out their contribution to the further development of philosophical thought. Contemporary philosophy is the period in the history of Western philosophy beginning at the late 19th century when the discipline is divided into two approaches - analytic and continental philosophy. In this course, the most relevant approaches in the contemporary philosophy will be discussed and connected with the corresponding events in the world's history. The course consists of lectures and exercises (3 hours of lectures and 2 hours of exercises per week), which include an analysis of the original philosophical texts of the period.

Course content (syllabus)

<https://www.ffrz.unizg.hr/wp-content/uploads/2023/10/Contemporary-Philosophy.pdf>

Elective Course in Philosophy of Nature: What is Life?

Lecturer: Assistant professor Petar Tomev Mitrikeski

L + E + S: 30+0+0

ECTS: 3

Course code: 228425

Course Description

The purpose and goals of the course are achieved through several thematic (teaching) units that achieve conceptual comprehensiveness. Thus, the individual thematic units are grouped through five main subthemes: (i) *the historical discussion of mechanists vs vitalists*, (ii) *the biochemical concept of the living matter*, (iii) *the scientific achievement of two fundamental Schrödinger's questions about the living matter: a) how order emerges from order again during genetic (i.e. vertical) continuity of the living matter?, and b) how the living matter from disorder creates order through metabolism during the homeostatic (i.e. horizontal) continuity?*, (iv) *the*

problem of the initial appearance of the living matter, and (v) the problem of “artificial” life. Each of the five subtopics includes one or more teaching units.

Elective Course in Ethics: Ecoethics

Lecturer: Assistant professor Luka Janeš

L + E + S: 30+0+0

ECTS: 3

Course code: 228423

Course Description

Through this course, students will be introduced to the basic concepts of ecological ethics and ecoethical perspectives developed throughout the history, with emphasis on the links and differentiations between biocentric, anthropocentric and ecocentric perspectives, as well as between pathocentric and holistic positions. The importance of eco-ethical perspectives in relation to the development of bioethics as a discipline will be evaluated, and the theses of significant Christian thinkers who have evaluated eco-ethical issues throughout history will be analysed and synthesized. The difference between "shallow" and "deep ecology" will be established as well, and the concept of "natural universe" will be elaborated. Also, we will critically evaluate the issue of the current environmental crisis.

Graduate study programme

PHILOSOPHY AND RELIGIOUS STUDIES
PHILOSOPHY

WINTER SEMESTER

Graduate study programme

Croatian Philosophy

Lecturer: Assistant professor Luka Janeš

L + E + S: 30+15+0

ECTS: 4

Course code: 53025

Course Description

Through the course, students will be introduced to the historical context and constellations that influenced the emergence and development of Croatian philosophical thought from its beginnings to modern times. Special focus is directed to the Croatian Renaissance philosophy and its European context. Franciscus Patricius (1529-1597) is one of the Croatian Renaissance philosophers in the question. The basic data from his life and the most important published works are briefly presented, and in more detail Patricius' main philosophical work *Nova de universis philosophia* (New Universal Philosophy). His philosophical system is elaborated in detail. Basic data about lives and writings is given about other Renaissance thinkers (Ivan Stojković, Benko Benković, Grgur Budisaljčić, Juraj Dubrovčanin, Antun Medo, Marko Marulić, Faust Vrančić, Matija Vlačić). Other important Croatian philosophers such as Ruđer Bošković, Šimun Čučić, Bartol Kašić, Juraj Križanić and Andrija Dorotića, as well as the important representatives of the 19th and 20th century are also considered. Also, significant representatives of the Croatian Neo-Scholasticism are taken into research account, with the focus on the Jesuit thinkers.

Philosophy of Culture

Lecturer: Assistant professor Luka Janeš

L + E + S: 30+0+0

ECTS: 3

Course code: 52578

Course Description

A term culture etymologically indicates primarily a cultivation of the human spirit, body and society, while the subject of culture usually denotes a complex set of institutions, values, ideas and practices that make up the life of a particular human group and its individuals, and which are transmitted and received by learning. It originally referred to the material process of the colonization, worshiping, cultivation, and fertilization of the land, while through the historical interpretive evaluation it transgresses to knowledge, faith, religion, art, morality, laws, and customs.

Linking the nature and spirit, the civilization and society, as well as the necessity and freedom, the concept of culture throughout history dialectically oscillates among these couples, and through this course, students will be introduced to their degrees, segments and relationships within the indicated development path. In addition to a historical overview of the evaluation of the culture concept, the course will focus on the contemporary concepts and reflections, with an emphasis on evaluating the relationship of faith, knowledge and art as the mutually corresponding and eminently inseparable elements of the fundamental importance for the development of the spirit of the era, as well as of the human spirit per se.

SUMMER SEMESTER

Graduate study programme

Rhetoric

Lecturer: Full professor Daniel Miščin

L + E + S: 30+0+0

ECTS: 3

Course code: 52579

Course Description

Each student during the semester, while studying the origin and development of rhetorical theory, prepares and gives at least three different speeches, in accordance with the traditional Aristotle's division of rhetoric into political, judicial and epideictic. In doing so, each of the presented speeches is analysed as an example, so that each student can practice the art of good speech and find convincing elements in each case. Given that there is an obvious disparity between the frequent need to use rhetoric and the practical knowledge of it, the course seeks to provide students with both practical and theoretical knowledge of rhetoric, particularly encouraging the recognition of links between historical rhetoric development and application of rhetorical rules to practical speaking exercises.

Course content (syllabus)

https://www.ffrz.unizg.hr/wp-content/uploads/2023/10/Miscin_Rhetoric.pdf

Bioethics

Lecturer: Assistant professor Luka Janeš

L + E + S: 30+15+0

ECTS: 4

Course code: 146301

Course Description

Interdisciplinary methodology has become a universal mark of the contemporary scientific research and debate. To that extent, bioethics, as an interdisciplinary field in which various perspectives and disciplines meet is immanently thematically related to the study and protection

of life and it offers fertile ground for the spread of philosophy and religiology in the domain of bioprotectionism, providing them with a clear practical dimension.

The aim of this course is to acquaint students with the specifics of the bioethical approach to moral issues imposed by scientific and technical progress, which are developed and used in the category of a comprehensively understood life. Furthermore, the aim of this course is to train students for independent thinking, argumentation and orientation in the key dilemmas of modern humanity, and in the moral dilemmas they may face in professional and public life, as well as for competent participation in the work of ethical and bioethical bodies.

Course content (syllabus)

<https://www.ffrz.unizg.hr/wp-content/uploads/2023/11/Syllabus-Bioethics.pdf>

Philosophy of Early Christianity – Patrology

Lecturer: Mikolaj Martinjak PhD

L + E + S: 30+15+0

ECTS: 4

Course code: 241173

Course Description

Course objectives are to observe the history of Christianity, with special emphasis on periods and individuals who are significant for certain periods. In the introductory notes, along with the definition, terms related to Early Christian literature are explained. Basic information is provided on the languages in which early Christian literature was created and preserved, on the technology of writing and copying, and the time period in which it was created. The relationship of this literature to Jewish and pagan culture and other ancient literary traditions is also shown. More important (critical and non-critical) editions of early Christian literary works are also indicated. It gives an account of individual early Christian writers, their lives, titles and contents of their writings, grouped according to the time and (or) space in which they created.

The goal of the course is to acquaint students with the richness and diversity of early Christian literature and its role in general culture and civilization. Through lectures, students are introduced to important topics, people and events from the period of early Christianity (the first seven centuries) with an emphasis on literary works. The goal is also to acquaint students with the development of early Christian literature, the circumstances in which it was created, people and their writings.

Undergraduate and graduate study programme

Philosophy of Thomas Aquinas

Lecturer: Full professor Anto Gavrić

L + E + S: 30+0+0

ECTS: 4

Course code: 26575

Course Description

Medieval philosophical and theological thought was characterized by the teachings of Thomas Aquinas. Moreover, Aquinas's thought had an enormous impact on the further development of philosophical thought in the areas of several philosophical and theological disciplines, and it is still relevant today. Therefore, this course focuses on the analysis of the original (selected) texts of Thomas Aquinas, which problematize metaphysical, ethical, political, epistemological and similar issues.

SUMMER SEMESTER

Undergraduate and graduate study programme

Theory of Evolution

Lecturer: Assistant professor Petar Tomev Mitrikeski

L + E + S: 30+0+0

ECTS: 3

Course code: 241272

Course Description

The purpose and goals of the course are achieved through several thematic (teaching) units that achieve conceptual comprehensiveness. Thus, the individual thematic units are grouped through two main subtopics: (i) *modes of biological evolution*, and (ii) *other themes in the philosophy of evolution*. Both subtopics cover several teaching units. The first subtopic seeks to describe the ways (mechanisms) through which evolution works, dealing with concepts such as *natural selection*, *sexual selection*, and *genetic drift*. The second subtopic reflects on the existing academic (sometimes very bitter) discussions that evolutionary biologists and philosophers of biology have with sociobiologists, evolutionary psychologists, and even the proponents of creationism. Furthermore, the second subtopic necessarily delves into a more detailed analysis of common dilemmas that are generally interesting in the philosophy of biology such as (i) replicator and transporter issues (instead of genes and organisms), or (ii) what exactly are the units and levels of natural selection or (iii) whether the genotype necessarily transmits some biological information and if so, in what exact sense, etc.

Course content (syllabus)

Elective Course in Christian Anthropology: Anthropological and Christian Character of Moral Theology

Lecturer: Assistant professor Tadija Milić

L + E + S: 30+0+0

ECTS: 2

Course code: 228396

Course Description

This course aims to deepen the understanding of the human and Christian character of moral theology. Primarily it seeks to stress the distinctively human, i.e., ethical character of moral theology, the prime interest of which is man and his realization under the aspect of his free, i.e., human activity. With a clearer insight into the dimension of moral theology which is common to any other moral, or rather, ethical scientific discipline, we wish to stress its particular scientific interest at the moral level - human character. Aside from the specificity of moral theology, the seminar strives to point out also the singular Christian character of moral theology. This is done through an underpinning in the moral teaching of three of the most prominent representatives of the great historical periods of Christian morality: the Apostle Paul (the Apostolic period), Aurelius Augustin (the Patristic period) and Thomas Aquinas (the Scholastic period) whose moral teaching comprises the historical substructure of our contemporary understanding of moral theology. The course consists of lectures (2 classes per week) which include five of the most important topics related to issues on the specificity of Christian morality as suggested by Servais Pinckaers in his most important work titled: *The Sources of Christian Ethics*. Lecture Content: the substance of moral theology; the difference between moral theology and other sciences; moral knowledge and positive knowledge; the comparison between the reflexive and positive methods; three dangers in the relationship between morality and other sciences; the difference between morality, art and technology; the quest for the human element; the problem of existence and the specificity of Christian morality; the analysis of a current response to the problem of Christian morality; the Christian morality of St. Paul; Christian morality in the Patristic period; Christian morality in the Scholastic period.

Elective Course in Ethics: Ecoethics

Lecturer: Assistant professor Luka Janeš

L + E + S: 30+0+0

ECTS: 3

Course code: 228423

Course Description

Through this course, students will be introduced to the basic concepts of ecological ethics and ecoethical perspectives developed throughout the history, with emphasis on the links and differentiations between biocentric, anthropocentric and ecocentric perspectives, as well as between pathocentric and holistic positions. The importance of eco-ethical perspectives in relation to the development of bioethics as a discipline will be evaluated, and the theses of significant Christian thinkers who have evaluated eco-ethical issues throughout history will be analysed and synthesized. The difference between "shallow" and "deep ecology" will be established as well, and the concept of "natural universe" will be elaborated. Also, we will critically evaluate the issue of the current environmental crisis.

Elective Course in Philosophy of God: Contemporary Science and Existence of God

Lecturer: Assistant professor Marina Novina

L + E + S: 30+0+0

ECTS: 3

Course code: 241117

Course Description

Course objectives are to acquaint students with theses and debates related to arguments in support of God's existence in relation to the assumptions and theories of contemporary science. To enable students to recognize, differentiate and understand different arguments in support of God's existence, different attitudes of scientists towards the question of God's existence, the limits of science, borderline issues of science and religion, and to independently argue their own point of view on the relationship between modern science and religion based on the literature read.

Seminar in Religions: The Relationship Between Religion and Science

Lecturer: Assistant professor Petar Tomev Mitrikeski

L + E + S: 0+0+30

ECTS: 3

Course code: 228399

Course Description

The purpose and goals of the course are achieved through several thematic (teaching) units that seek to achieve the conceptual comprehensiveness of the given topic. Thus, individual thematic units are covered with three main subtopics: (i) *a historical overview of the concepts of religion and science*, (ii) *levels, i.e. perspectives of their relationship*, and (iii) *the state of the relationship in different world cultures with an emphasis on the Christendom*. The first subtopic covers the following units: (i.1) *the concepts of religion and science*, (i.2) *their state in the Middle Ages*, and (i.3) *religion and science in modern times*. The second subtheme deals in more detail with their current relationship, focusing on individual considerations, and includes: (ii.1) *inconsistency*, (ii.2) *mutual independence*, (ii.3) *possible dialogue*, and (ii.4) *proposed philosophical unification*. The third subtopic includes: (iii.1) *the relationship between religion and science in Christendom*, (iii.2) *a brief overview of the relationship between religion and science in predominantly non-Christian societies*, and (iii.3) *the survey results on the attitudes of scientists and the general public about religion and science*. Also, if students want, the lecturer can organize a debate on a given topic, which deals with an individual thematic unit chosen by students. All students participate in the debate while the lecturer only observes and arbitrates if necessary.

Elective Course in Philosophy of Nature: What is Life?

Lecturer: Assistant professor Petar Tomev Mitrikeski

L + E + S: 30+0+0

ECTS: 3

Course code: 228425

Course Description

The purpose and goals of the course are achieved through several thematic (teaching) units that achieve conceptual comprehensiveness. Thus, the individual thematic units are grouped through five main subthemes: (i) *the historical discussion of mechanists vs vitalists*, (ii) *the biochemical concept of the living matter*, (iii) *the scientific achievement of two fundamental Schrödinger's questions about the living matter: a) how order emerges from order again during genetic (i.e. vertical) continuity of the living matter?, and b) how the living matter from disorder creates order through metabolism during the homeostatic (i.e. horizontal) continuity?*, (iv) *the problem of the initial appearance of the living matter*, and (v) *the problem of "artificial" life*. Each of the five subtopics includes one or more teaching units.

Elective Course in Philosophy of Science: Sociological and Psychological Aspects of Science

Lecturer: Assistant professor Marina Novina

L + E + S: 30+0+0

ECTS: 2

Course code: 241120

Course Description

The objectives of this course are to acquaint students with the origin and development of sociology and psychology of science, with basic concepts of sociology and psychology of science and with sociological and psychological aspects of science. To train students to recognize and distinguish different aspects of science, and to argue for or against different concepts of science based on the literature read.

Seminar in Contemporary Philosophy: Nietzsche

Lecturer: Marijana Kolednjak PhD

L + E + S: 0+0+30

ECTS: 3

Course code: 228427

Course Description

The aim of the seminar is to provide students with an insight into the most important works of F. Nietzsche, to introduce them to the understanding of the cultural framework of the origin of his works and the influence his thought had on the culture of the 20th century, especially on what is called postmodernism.
